(54) Title: METHODS FOR IDENTIFYING MESSAGES AND COMMUNICATING WITH USERS OF A MULTIMODAL MESSAGE SERVICE

(57) Abstract: Methods for combining speech with existing text wireless Short Message Service (SMS) to create a multimodal SMS service are provided. A user of standard SMS text service is provided with a link within each message that allows adding or retrieval of a voice message associated with an SMS text message. A speech server in the wireless network may be used for recognition of voice commands, rendering of text into speech, and recording or playing back voice recordings. An automatic and unique identification of each message is created to allow retrieval of the message without manually selecting the message. Additional services include message lists, integration with voicemail systems, image and video messages, cross-functional applications with Multimedia Messaging Services (MMS) and Enhanced Message Services (EMS), and extensions of the combination of voice with text SMS to other computing devices such as PDAs and PCs.
